

# Digimatic Micrometer

# Micrometro Digimatic per esterni

# Digimatic Outside Mikrometer

# 디지매틱 마이크로미터

# 数显外径千分尺

# 數位外徑測微器

## Safety Precautions

To ensure safety, use this instrument in conformance with the directions and specifications given in this User's Manual.

## Export Control Compliance

The goods, technology or software described herein may be subject to National or International, or Japanese Export Controls. To export directly or indirectly such matter without due approval from the appropriate authority, it may therefore be a breach of export control regulations and the law.

**WARNING** • The silver oxide battery used for this instrument contains interfering substance. Should the liquid come into contact with your skin or eyes, wash immediately, then consult a physician. Should it get into the mouth, immediately rinse inside the mouth, swallow plenty of water and vomit it, then consult a physician.

• The tip of the contact point on this micrometer is sharp. Handle it with care so as not to scratch

yourself.

• Removal of the protective plastic covering from the electronic unit may damage the instrument.

• Do not use and store the micrometer at places where the temperature will change abruptly. Prior to use thermally stable the instrument.

• Do not store the micrometer in a humid place or near a heat source.

• When using the coolant point micrometer in a position where it may be splashed directly with coolant, or the like, ensure that the battery cover is closed tightly. When closing the cover, ensure that the fine screws are tight. If the cover is not closed tightly, the fine screws may fall off.

• After use, apply rust prevention measures, as occurrence of rust can lead to device malfunction.

• Do not apply sudden shocks including a drop to the instrument.

• Wipe off dust, cutting chips, and moisture from the instrument after use.

• To clean the instrument, use a soft cloth soaked in a diluted neutral detergent. Do not use any organic solvent (thinners, benzene, etc.).

• Dirt on the spindle may cause malfunction. When a spindle gets dirty, wipe it with a cloth dipped in alcohol to thoroughly remove the dirt and spray micrometer model (part no. 207000) on it.

• The spindle is made of stainless steel and is not suitable for use in water.

• Do not use an electric meter or other such devices on the micrometer.

• Do not charge or discharge the battery. Only use cause short circuit.

• If the battery is not in use, remove the battery from the micro-meter for safe keeping. The battery could leak and cause damage to the micrometer.

• The warranty shall not apply if the product fails or is damaged as a result of wear and/or battery abuse.

• Do not immerse the micrometer in water during use, as this may possibly lead to infiltration of coolant, etc. Furthermore, exercise caution when using the device in a position where it is sprayed directly with a jet of liquid, or the use of coolant, etc., may be unsatisfactory in such cases, depending on the conditions of use.

Refer to the illustrations on the reverse side while reading this manual.

## IMPORTANT

• Do not disassemble. Do not modify this instrument. It may damage the instrument.

• Do not use and store the micrometer at places where the temperature will change abruptly. Prior to use thermally stable the instrument.

• Do not store the micrometer in a humid place or near a heat source.

• When using the coolant point micrometer in a position where it may be splashed directly with coolant, or the like, ensure that the battery cover is closed tightly. When closing the cover, ensure that the fine screws are tight. If the cover is not closed tightly, the fine screws may fall off.

• After use, apply rust prevention measures, as occurrence of rust can lead to device malfunction.

• Do not apply sudden shocks including a drop to the instrument.

• Wipe off dust, cutting chips, and moisture from the instrument after use.

• To clean the instrument, use a soft cloth soaked in a diluted neutral detergent. Do not use any organic solvent (thinners, benzene, etc.).

• Dirt on the spindle may cause malfunction. When a spindle gets dirty, wipe it with a cloth dipped in alcohol to thoroughly remove the dirt and spray micrometer model (part no. 207000) on it.

• The spindle is made of stainless steel and is not suitable for use in water.

• Do not use an electric meter or other such devices on the micrometer.

• Do not charge or discharge the battery. Only use cause short circuit.

• If the battery is not in use, remove the battery from the micro-meter for safe keeping. The battery could leak and cause damage to the micrometer.

• The warranty shall not apply if the product fails or is damaged as a result of wear and/or battery abuse.

• Do not immerse the micrometer in water during use, as this may possibly lead to infiltration of coolant, etc. Furthermore, exercise caution when using the device in a position where it is sprayed directly with a jet of liquid, or the use of coolant, etc., may be unsatisfactory in such cases, depending on the conditions of use.

Refer to the illustrations on the reverse side while reading this manual.

## [1] Name of Each Part

1. PRESET button 2. ZERO/ABS button 3. HOLD button

4. Infrared remote button (only on metric models) 5. LCD 6. Thimble

7. Constant force device 8. Spindle 9. Clamp knob

10. Data output connector 11. Cover 12. Battery compartment cover (at rear)

13. Coolant point (coolant point type only)

## [2] Installing the Battery

### IMPORTANT

• When the battery has been installed, first press the PRESET button, but do not rotate the thimble while the preset values are being set (see Fig.[2]). Rotating the thimble during this time may result in failure in setting the default settings. Set the thimble under the head of the screwdriver, then rotate the thimble to set the correct count. Reininstall the battery if you should have to move the thimble during this time.

• The preset values are canceled when the batteries are reinstalled. Reset the preset values if the batteries have been removed or replaced.

• Use only an SR44 button-type silver oxide cell. (The supplied battery is used only for purpose of checking the functions and performance of the instrument, therefore it may not satisfy the specified battery life.)

• Carefully remove the battery from the cell holder and the seal and the seal is mounted properly, the micrometer may not display a correct value or any failure may result.

• In the rare event of an abnormal display appears, such as an error display or count failure, the battery should be removed and inserted again. Please refer to the instructions for handling the battery.

• Please dispose of the battery in accordance with local regulations regarding disposal of hazardous substances.

Install the supplied battery by referring to the figure on the left (see Fig.[2]).

(1) Remove the battery compartment cover by turning it counter-clockwise with a coin, etc., set in the hexagon.

(2) Install a new battery with the "+" side facing up and put back the battery compartment cover in reverse order of the above.

## [3] Button Function and Display Indication

IMPORTANT

The LCD automatically turns off if it has been idle for 20 minutes. To turn on the LCD, turn the thimble or press the ZERO/ABS button.

### 1. Button function

Press to zero the display. Press and hold to display the dimension from the datum point (measuring force of the area).

2. Display button

Holds the display.

Holds the current mode for comparative measurement.

The display is held. To cancel it, press the HOLD button.

3. Function lock

When the function lock is set, it is in the LCD and only the [HOLD] operation is possible.

Initial values: PRESET, ZERO/ABS, in/mm (only on metric models)

4. Error display

Shows an error message when a counting error occurs by the initial setting error of the electronic unit or abnormal setting error. Refer to the battery again and perform original setting.

5. Err-Off

The display value exceeds >999.999 mm. Rotate the thimble to restore to correct reading.

6. Coolant point

The display value exceeds >12.000 mm for P1.

7. Coolant point

The display value exceeds >999.999 mm. Rotate the thimble to restore to correct reading.

## [4] Error and countermeasure

1. The battery voltage is low. Immediately replace the battery.

2. Err-Off

Err-Off indicates when a counting error occurs by the initial setting error of the electronic unit or abnormal setting error. Refer to the battery again and perform original setting.

3. Err-S

The display value exceeds >999.999 mm. Rotate the thimble to restore to correct reading.

4. Err-Off

The display value exceeds >12.000 mm for P1.

5. Coolant point

The display value exceeds >999.999 mm. Rotate the thimble to restore to correct reading.

## [5] Datum Point Setting

### IMPORTANT

When the battery has been installed, first press the PRESET button, but do not rotate the thimble while the preset values are being set (see Fig.[2]). Rotating the thimble during this time may result in failure in setting the default settings. Set the thimble under the head of the screwdriver, then rotate the thimble to set the correct count. Reininstall the battery if you should have to move the thimble during this time.

• Remove any debris or grease from the measuring surfaces before making this setting.

• It is recommended that the micrometer is held in the same position and under the same conditions for both setting and actual measurement. The setting procedure is as follows:

## [6] Presetting the Datum Point

### IMPORTANT

Zero or a value inputted in advance are stored in the micrometer memory. The micrometer is able to store two preset values (P1, P2) in memory.

Switching Between P1 and P2

Switch between P1 and P2 by turning the HOLD button while "P1" or "P2" is flashing.

Example: If the display shows "P1" and you want to switch to "P2", press the HOLD button while "P1" is displayed.

Setting the Datum Point

Turn the thimble until the dimension to be measured is displayed on the LCD screen.

Press the PRESET button. The previously registered value is displayed and stays for 20 minutes. To ri

cease the display, turn the thimble again.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.

Press the PRESET button again. The previously registered value disappears and the thimble is held at the last position.
